

Lab 6: codebreaker:

You've intercepted a series of ASCII characters and want to try and translate it.

- a) Write a function using a List Comprehension (LC) that translates it to english
- b) run the function & print the results

the series of numbers is:

113 117 105 116 116 105 110 032 116 105 109 101

hint #1: write a method that takes an ascii character and converts it to a char.

hint #2: update your method with an LC which iterates over list of characters & returns the string

if the result comes out like: [r,e,s...] that's ok
